

## Anti-Human CD103-151Eu

**Catalog #:** 3151011B

**Package Size:** 100 tests

**Storage:** Store product at 4°C. Do not freeze.

**Cross Reactivity:** Cynomolgus Monkey

**Clone:** Ber-ACT8

**Isotype:** Mouse IgG1

**Formulation:** Antibody stabilizer with 0.05% Sodium Azide

### Technical Information

**Validation:** Each lot of conjugated antibody is quality control tested by CyTOF<sup>®</sup> analysis of stained cells using the appropriate positive and negative cell staining and/or activation controls.

**Recommended Usage:** The suggested use is 1 µl for up to 3 X 10<sup>6</sup> live cells in 100 µl. It is recommended that the antibody be titrated for optimal performance for each of the desired applications.

Human PBMCs were incubated for 3 days in media alone (left) or with PHA (right) and then cells were stained with 154Sm-anti-CD45 (HI30) and 151Eu-anti- CD103 (Ber-ACT8).

### Description

CD103, also known as integrin alpha E (ITGAE), is a type I transmembrane integrin protein that binds integrin beta 7 to form the integrin αEβ7. CD103 is expressed on intraepithelial lymphocyte (IEL) alpha-beta and gamma-delta T cells, a subset of regulatory T (Treg) cells, lamina propria T cells, and a subset of dendritic cells. CD103 has also been used as a marker to identify hairy cell leukemia. CD103 is the primary ligand for E-cadherin, an adhesion molecule found on epithelial cells. It is likely that this interaction plays a role in T cell homing to intestinal sites. Stimulation of human T cells induces up-regulation of CD103.
